C (67/100)

Summary

Check	Status	Details
SSL Certificate	pass	Issued by SSL Corporation. Valid until Dec 25 22:56:35 2026 GMT.
Page Title	warning	"Example Domain" (14 characters) Suggested fix: The page title is outside the ideal 50-60 character range. Adjust it to be descriptive but concise for better SEO and search-result display.
llms.txt	fail	llms.txt not found Suggested fix: No llms.txt file was found. Consider adding one at the site root — a markdown file summarizing your site for LLMs.
Sitemap Available	fail	No sitemap found at /sitemap.xml or in robots.txt Suggested fix: No sitemap was found at /sitemap.xml or referenced in robots.txt. Add an XML sitemap to help search engines index the site.
Mobile Viewport	pass	Found: width=device-width,initial-scale=1
Images Missing Alt Text	pass	0 of 0 images are missing alt text.
Robots.txt Available	fail	robots.txt not found Suggested fix: No robots.txt file was found. Add one at the site root to guide search engine crawlers.
Website Accessible	pass	Status code 200, responded in 223ms.
Broken Links	pass	Checked 1 link, 0 broken.
JS Dependence	fail	26 words detected in raw HTML. Suggested fix: The raw HTML has very little visible text, suggesting heavy client-side rendering. AI web-fetchers that only read raw HTML will likely see an empty or near-empty page. Consider server-side rendering or static generation for key content.
Semantic HTML	warning	No <article>/<section> tags found. 0 H1 tags found. Suggested fix: HTML structure could be improved for AI parsing — ensure exactly one <h1> per page and use <article>/<section> tags to mark up content areas.
Anti-Bot / Header Check	pass	Status code 200 when requested as an AI bot.
Structured Data (JSON-LD)	fail	No JSON-LD structured data found. Suggested fix: No structured data (JSON-LD) was found. Add Schema.org markup (e.g. Organization, Product, Article, or FAQPage) to help AI systems understand your content.
AI Crawler Access	pass	9 of 9 AI crawlers allowed.

Check	Status	Details
Meta Description	fail	Not found on the page. Suggested fix: No meta description was found. Add a <meta name="description"> tag summarizing the page's content for search engines.

How This Score Was Calculated

Each check contributes a weighted number of points toward a 100-point total score. A check that fully passes earns its full weight; a warning earns half; a failure earns none. The final score is the sum of earned points divided by the total possible points, as a percentage.

Check	Weight	Grade	Score Range
Website Accessible	20 points	S	90–100
SSL Certificate	20 points		
Mobile Viewport	10 points		
Page Title	10 points	A	80–89
Meta Description	10 points		
Broken Links	10 points		
Images Missing Alt Text	10 points	B	70–79
Robots.txt Available	5 points		
Sitemap Available	5 points		
AI Crawler Access	15 points	C	60–69
Anti-Bot / Header Check	15 points		
Structured Data (JSON-LD)	10 points		
JS Dependence	10 points	F	0–59
llms.txt	5 points		
Semantic HTML	5 points
