How This Score Was Calculated

Each module's findings first collapse into a 0-100 sub-score (a passed finding earns full credit, a warning earns half credit, a critical finding earns no credit). Each module is then weighted by its relative SEO impact, and the overall score is the weighted average across all modules. If Indexability has any critical finding, the overall score is capped at 40 regardless of the other modules, since a page that cannot be indexed makes everything else moot.

Module	Weight	Score

Images	15	81/100
URL Structure	10	100/100
Canonical URL	15	50/100
